EDUCATION

University of Maryland at College Park, Graduate Certificate in Cloud Engineering, May 2026 **College Park, MD**

- **Relevant Courses:** Cloud Computing, Virtualization/Container Technologies, Python for Cloud, Security

Oregon State University, Bachelor of Science- Computer Science, Web & Mobile App Dev Track **Corvallis, OR**

- **Cumulative GPA:** 3.80 / 4.00, *Magna Cum Laude*, Graduated in June 2025

TECHNICAL SKILLS

- **Languages:** Python, Java, JavaScript, TypeScript, SQL, HTML, CSS
- **Frameworks & Tools:** Flask, Node.js, React, Angular, Git, RESTful APIs, Tailwind, .NET
- **Cloud & Infrastructure:** Azure, AWS (Lambda, S3, API Gateway, Rekognition), CI/CD, Docker, Kubernetes, Linux
- **Databases:** SQL, MongoDB
- **Development Practices:** Agile/SCRUM, SDLC, automated testing, secure coding, accessibility-aware UI design

WORK EXPERIENCE

Junior Software Engineer - AppKu (Software Development Startup), Milwaukie, OR, Onsite August 2025 to May 2026

- Built and enhanced full-stack features for AppKu's enterprise business applications platform, supporting customers transitioning from legacy tools to modern, automated digital workflows.
- Improved backend API performance by optimizing SQL queries, strengthening error-handling logic, and increasing reliability across customer-facing workflows.
- Developed responsive, React interfaces informed by client demos, translating organizational processes into intuitive UI flows.
- Created reusable React components and improved state-management patterns, reducing code duplication and improving maintainability across AppKu's multi-app ecosystem.
- Implemented a Python-based end-to-end testing framework from scratch, reducing customer-reported bugs by 50% through early detection and automated regression coverage.
- Collaborated with a small, high-impact engineering team to deliver secure, scalable applications following Agile Scrum practices.

Software Engineer Volunteer - One Community Global LLC, San Gabriel, CA, Remote August 2024 to August 2025

- Full-stack development of an open-source project management software for sustainability projects across the world.
- Optimized front-end user interfaces, building responsive components, updating dashboards.
- Improved data usability for 1300+ volunteers by creating algorithm-filtering and sorting, and error handling features across large datasets.
- Developed CRUD functionality to support accurate data entry, retrieval, and validation across high-volume data tables
- Enhanced backend data flows and database-integrated features to improve system responsiveness and reliability.

Software Engineer, Full-Stack Intern - Mission Technologies, div of HII, Norfolk, VA, Hybrid June 2023 to August 2023

- Developed seamless frontend features for a simulation project, integrating live data from a MongoDB backend
- Gained proficiency in SCRUM, an agile development methodology, participating in weekly sprints to execute tasks, discuss progress, address questions, and plan upcoming tasks.
- Executed peer reviews, debugging, enhancing design, documenting, and testing.

PROJECTS

Book Hunt App - Reading Insights & Recommendation App (a personal project)

- Built a full-stack reading-management app using **Flask, SQLite, and Jinja2** with secure authentication, real-time book data from the **Open Library REST API**, and an **Azure OpenAI**-powered recommendation feature. Designed a drag-and-drop interface for organizing reading lists, containerized the application with **Docker**, and implemented a **CI/CD pipeline** to automate testing and deployment. Deployed in **Microsoft Azure**, demonstrating cloud hosting, environment consistency, and production-ready engineering practices.

Item Identifier (Summer 2025)

- Built an AI-driven item identification application using **AWS (S3, Lambda, API Gateway, Rekognition)**, implementing **serverless architecture** that processes images and returns real-time object predictions. Improved cloud deployment, automation, and ML integration skills through hands-on development.
